A transparent proprietary-trading platform, built for the hybrid evaluation era

Pre-Seed · USD 50–100K under evaluation · Canada establishment planned
November 2026 — Confidential

INVESTMENT THESIS

Rising global demand for trader evaluation, and a market that rewards transparency

$850M
Industry revenue 2026 (analyst est., +45% YoY)

12M
Challenge purchases per year, industry-wide

$24.5K
Peak cash need to reach profitability (Base)

Openfund Prop couples a published, honestly-labelled challenge catalog with a working, repository-verified trading terminal — then adds a selective live-capital layer that converts proven evaluation skill into proprietary risk, not customer risk.

The pre-seed ask funds commercial activation of an MVP that already executes, values and reports simulated trades with server-authoritative accounting.

MARKET PROBLEM

Fragmented tools, opaque rules, and broken trust

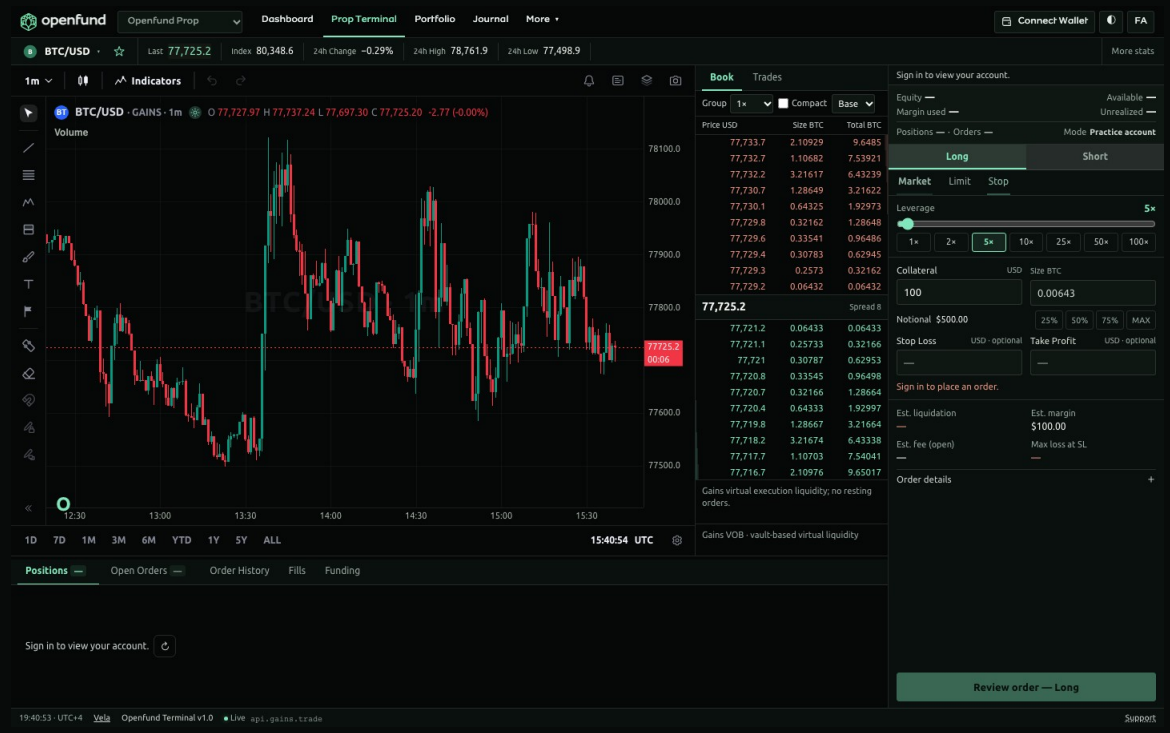

Fragmented workflow	Charts, feeds, account portals and journals live in different products; traders cannot reconcile performance.
Opaque evaluation terms	Buried drawdown rules and payout conditions; industry incidents (CFTC v. MyForexFunds, 2023) punished simulated-performance mislabelling.
Platform dependency	MetaQuotes withdrew MT4/MT5 from US-facing prop firms (Feb 2024); firms without own terminals lost their storefront.

Sources: CFTC (2023); FinanceMagnates (2024); repo documentation discipline.

THE SOLUTION

One connected workspace with honest product boundaries

- Published challenge catalog — one source of truth rendered across landing, comparison, FAQ and Rulebook
- Server-authoritative simulated execution: orders, SL/TP, partial closes, liquidation, Decimal valuation, persistent ledger
- Explicit simulation status everywhere — purchase activation and payouts are plainly labelled as not-yet-operational
- Bilingual from day one: English + Persian with full RTL layouts
- Private trader journal: notes, tags, search, import/export in the same account context

Live product screenshot from the repository (docs/assets/screenshots).

PRODUCT & MVP STATUS

Working platform today; commercial activation is the funded step

COMPLETED — repository-verified

- ✓ React shell, EN/FA + RTL
- ✓ Shared Vela terminal
- ✓ Simulated execution engine
- ✓ Persistent ledger (PostgreSQL)
- ✓ SIWE wallet sessions
- ✓ Portfolio & analytics
- ✓ Private journal
- ✓ CMS & challenge catalog
- ✓ CI + Render blueprint

PLANNED — funded by this round

- ○ Paid challenge activation
- ○ Evaluation rule enforcement
- ○ Funded accounts & rewards
- ○ Payout processing
- ○ Free-trial provisioning
- ○ Live trading component (hybrid)

Status per the repository's canonical capability register (reviewed 2026-11-02). Nothing here overstates readiness.

HYBRID PROP TRADING MODEL

Simulated evaluation first; real capital only for the proven few

1

Challenge purchase

One-time fee; published terms

2

Simulated evaluation

Targets, daily/total loss limits

3

Funded stage

Contractual rewards, bi-weekly cycles

4

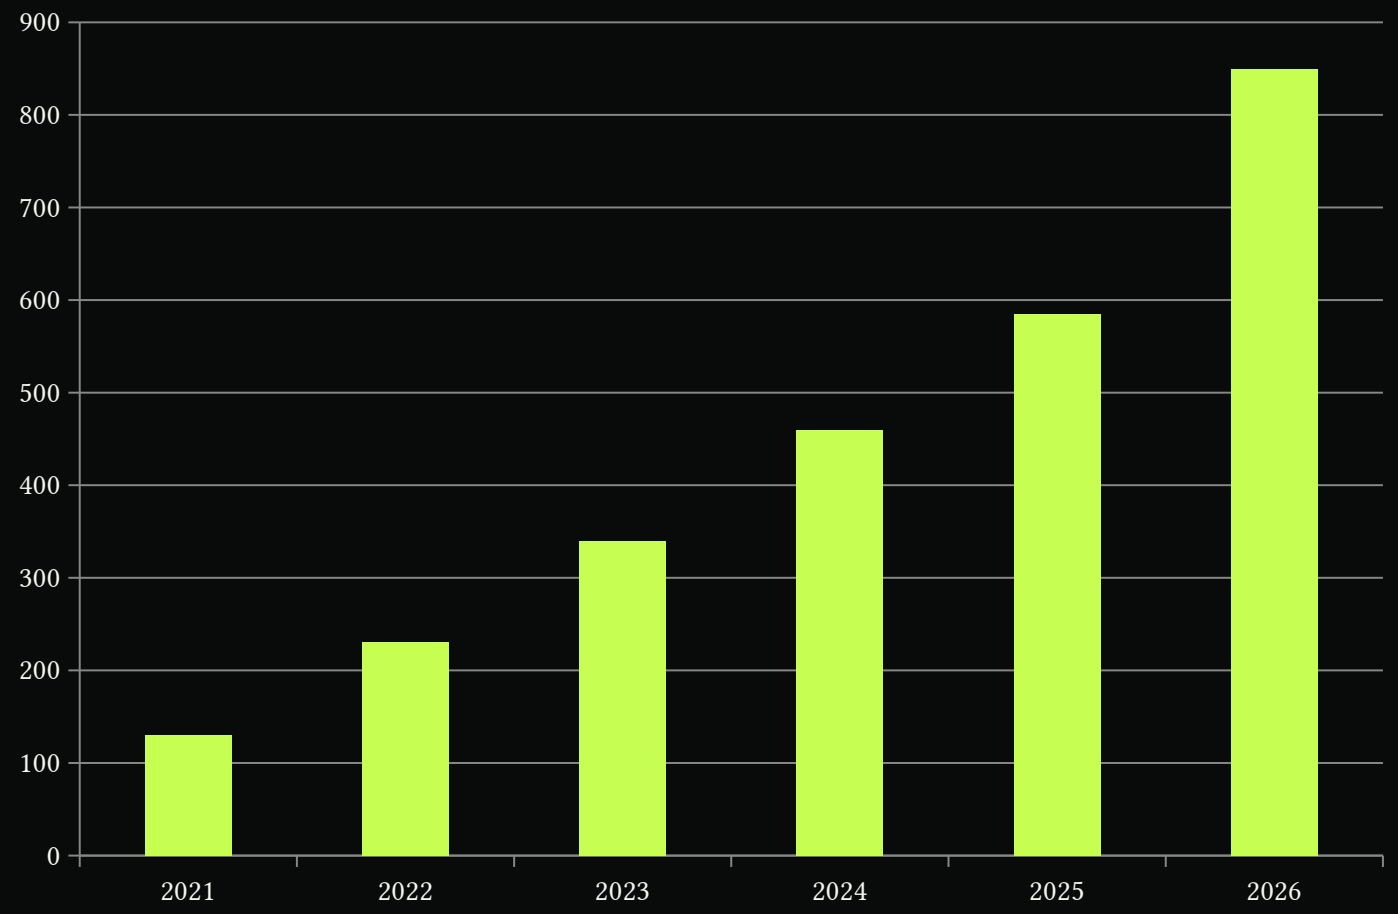

Selective live capital

Top performers, capped pool

Simulated performance, contractual rewards and real trading P&L are separated in accounting and in product copy. The live-execution component is a proposed architecture subject to technical, operational and legal validation — allocated capital is an asset deployment, never an expense; trading volume is never revenue.

MARKET OPPORTUNITY

A young industry compounding at ~40%✦ per year

~120–150

active firms 2026 (down from 220+ peak — consolidation favours credible entrants)

40–50%

of purchases are affiliate-driven — Openfund's bilingual segment is under-served

SOM logic

0.1–0.3% share of purchase volume ≈ the Base-case revenue trajectory

Industry revenue series: Track360 analyst estimates (July 2026); no authoritative TAM exists — figures are third-party estimates, presented as such.

COMPETITIVE LANDSCAPE

Openfund prices at/below the 100K median

Firm	2-Step 100K	1-Step 100K	Model	Est. scale
FTMO	€540	€499	2-phase + split	$180–210M rev
FundedNext	$550	$570	Multi-format	$110–140M rev
The5ers	$405	$329	Instant + scaling	$65–85M rev
FundingPips	$652	$666	Eval + Zero instant	—
Topstep	$99/mo	—	Futures subscription	$45–60M rev
OPENFUND (published)	$652	$666 / $444	Hybrid + own terminal	Pre-seed

Fees: Pipster database (verified 2026-09-28); scale: Track360 estimates; Topstep is futures (different class). Median 100K: $538 2-step / $509 1-step.

COMPETITIVE DIFFERENTIATION

Own terminal, honest labels, bilingual reach

Own terminal, platform-independent

The shared Vela workspace removes MetaTrader dependency — the Feb-2024 lesson the industry paid for.

Radical status transparency

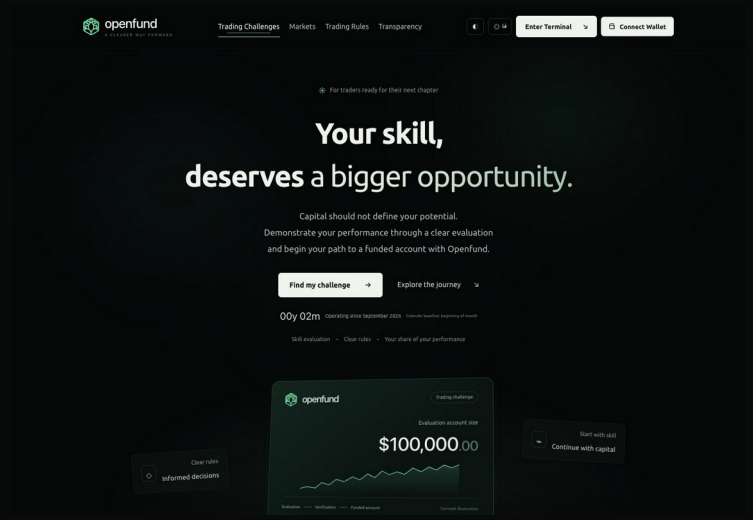

Unbuilt capabilities are labelled unbuilt — in checkout, FAQ and Rulebook. Trust is the product.

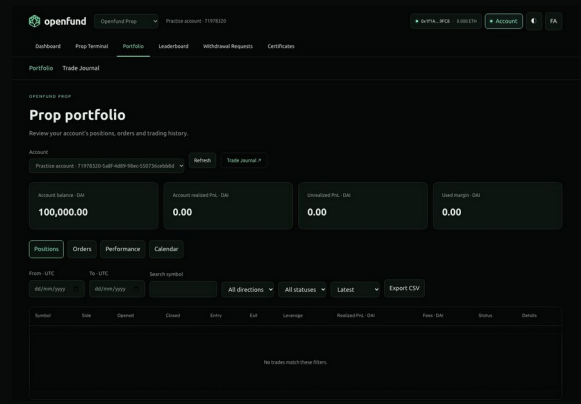

Bilingual EN/FA from day one

A materially under-served trader segment; UI, catalog and journal all support Persian + RTL.

Cost discipline by design

$24.5K peak cash need (Base) — simulated operations carry no customer-capital risk.

REVENUE & BUSINESS MODEL

Published catalog — one-time fees, contractual splits

Program	Sizes	Fee range	Phases	Split
Standard	5K–100K	$44–$652	2	80% bi-wk / 100% mo
One-phase	5K–100K	$74–$666	1	80% bi-wk / 100% mo
Instant	5K–200K	$60–$888	0	95% / 14 days
Free Trial	5K–100K	free	2	— (lead instrument)

Revenue architecture: challenge fees (net of promos, refunds, chargebacks) are the primary line. Trader rewards are a cohort-driven liability (active funded pool × participation × average payment), with payout-to-revenue as an output control. Repeat purchases (30–40% of failed buyers repurchase within 90 days) compound the fee base.

GO-TO-MARKET STRATEGY

Affiliate-led, bilingual-first, trial-funnelled

Phase 1 — Community & content

Bilingual content and trader education; 14-day free trial as a lead instrument (no reward, no conversion — by design).

Phase 2 — Affiliate program

10% revenue share at launch, scaling with volume; industry CPA benchmarks $40–80 — Openfund starts lean.

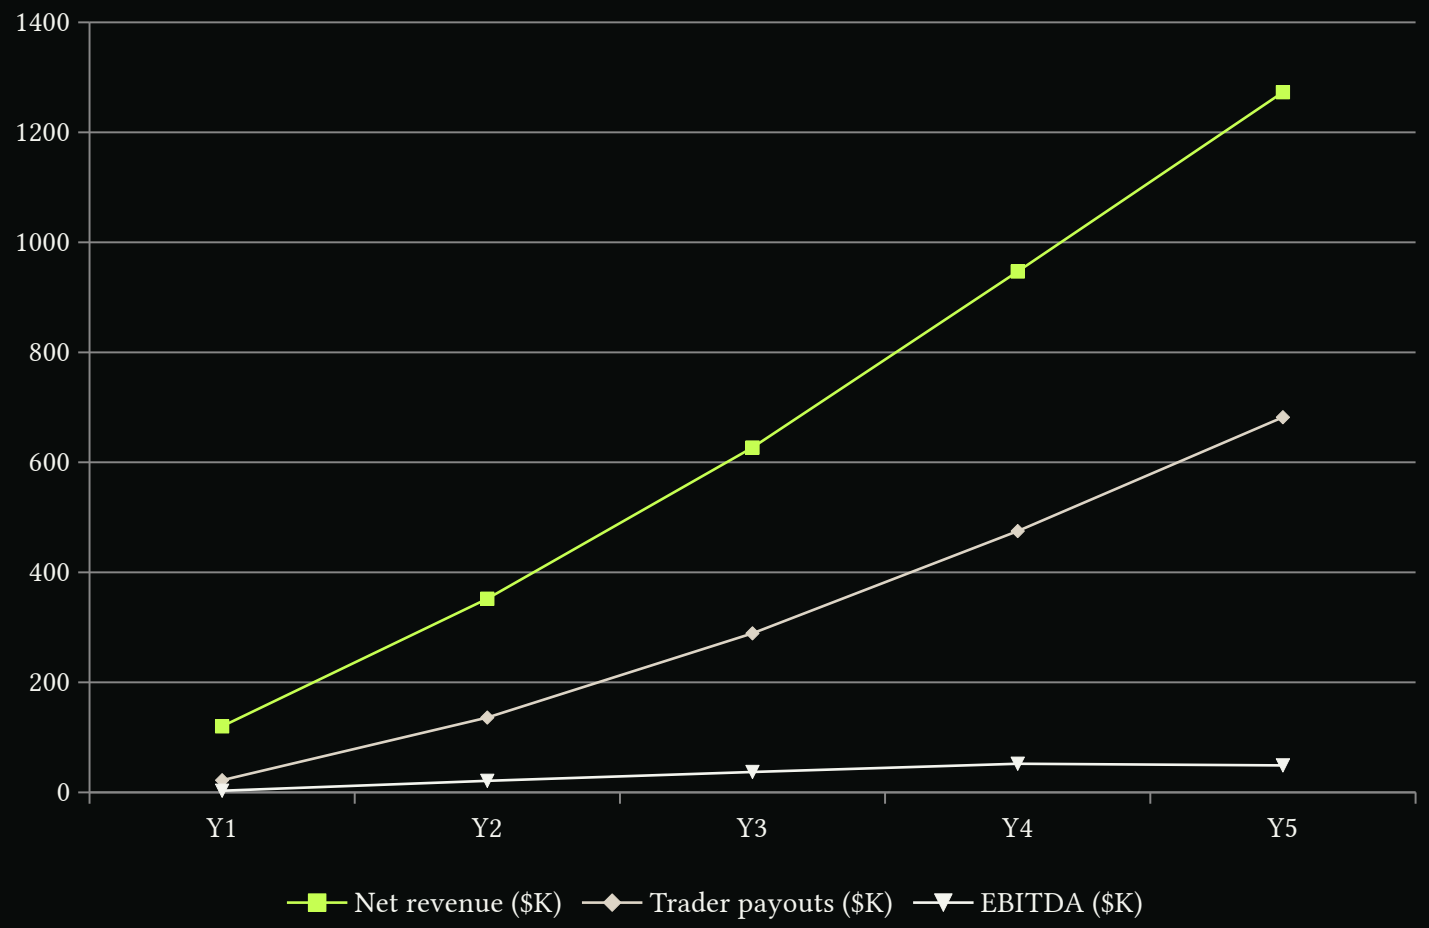

Phase 3 — Regional depth

Persian-speaking markets under-served by credible, regulated-adjacent firms; expansion by language, not geography.

Free trial terms: published, provisioning not yet operational — activates with commercial launch.

FINANCIAL OUTLOOK — BASE SCENARIO

Profitable from Year 1; 60-month model, formula-verified

Scenario	5y revenue	5y EBITDA	$50K ask
Conservative	$0.58M	-$0.28M	Insufficient
Base	$3.32M	+$0.16M	Sufficient
Optimistic	$20.96M	+$3.80M	Sufficient

Payout/revenue (5y) **48%**

LTV / CAC **8.6x**

Funded accounts, Y5 **1,025**

All figures from Openfund_Prop_Financial_Model.xlsx (single source of truth): 29 sheets, 6,749 live formulas, 0 errors; scenario switch recalculates the whole package.

CANADIAN ESTABLISHMENT STRATEGY

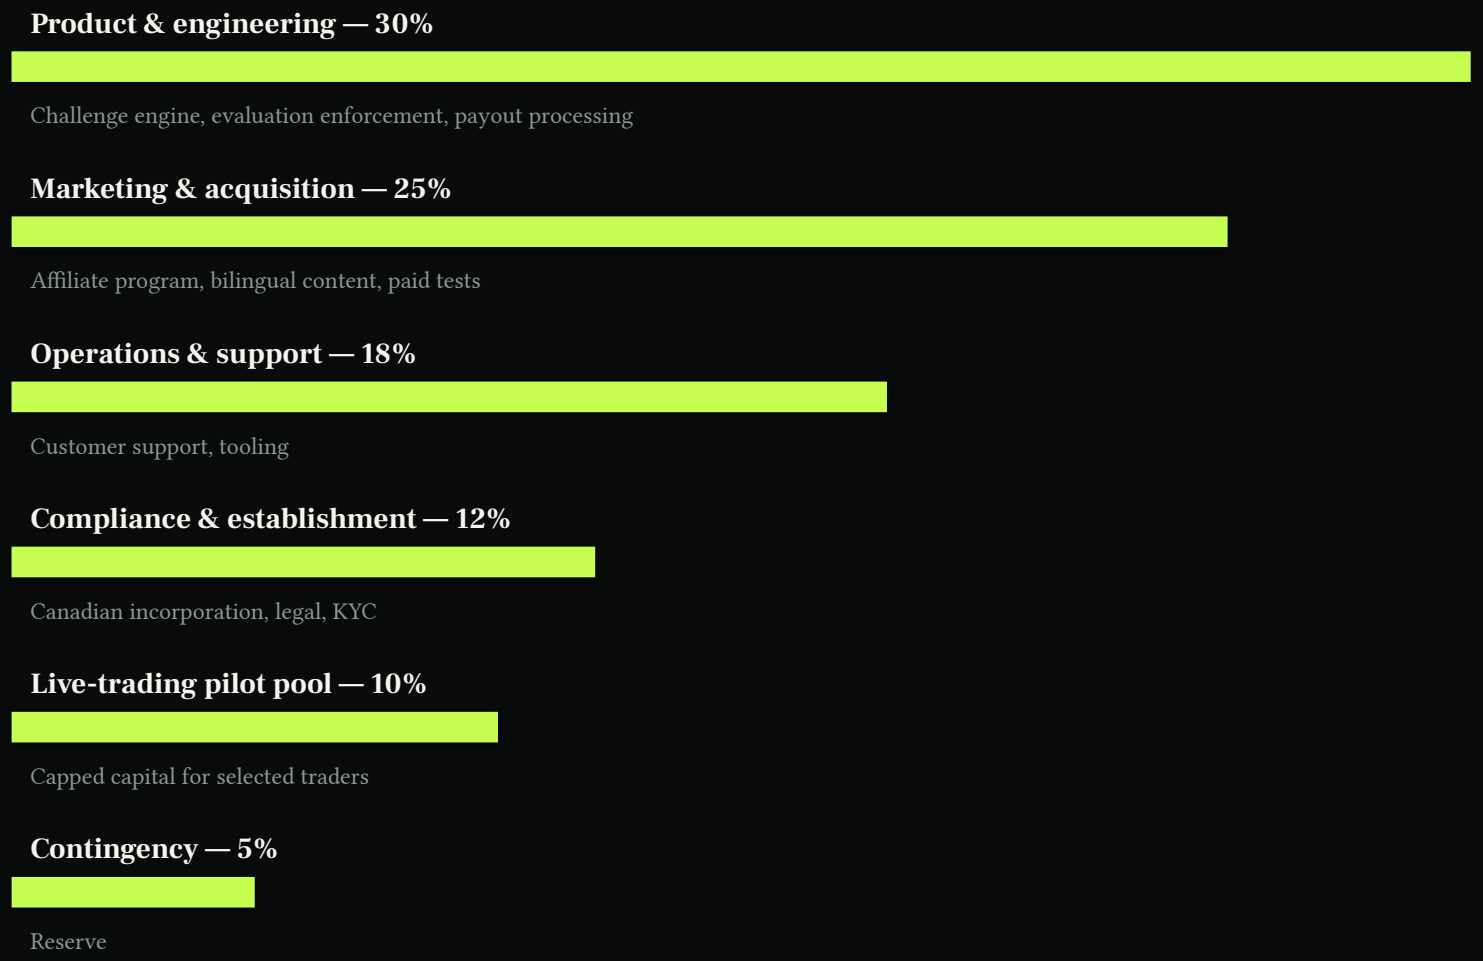

Planned federal incorporation — clearly not yet incorporated

Federal incorporation (CBCA)	$200 online, 1 business day; annual return $12 — verified Corporations Canada fees
Tax posture	CCPC small-business rate 9% federal + 2.2% Ontario (combined ~11.2% on first $500K) — verified CRA
Compliance budget	≈$3,950 one-off establishment; ≈$2,312/yr compliance (accounting, filings, address)
Regulatory approach	Simulated evaluations + contractual rewards require professional Canadian securities advice before launch; honest labelling mitigates the MyForexFunds pattern

Start-up Visa Program: closed to new applications since 2025-12-31 (2025-commitment exception to 2026-06-30); successor pilot announced, not launched (IRCC, 2025-12-19). Immigration eligibility is separate from business viability.

FUNDING REQUIREMENTS & USE OF FUNDS

USD 50–100K pre-seed — three launch scenarios

Lean — $50K

Sufficient in Base scenario; trough $24.5K incl. reserve

Base — $75K

Buffered runway; earlier affiliate ramp-up

Accelerated — $100K

Funds faster product cadence + live-trading pilot

Use-of-funds shares are recommendations tied to the model's Use of Funds sheet; funding verdicts recompute with the scenario selector.

ROADMAP & MILESTONES

Acceptance-gated delivery, not promised dates

Q1 2027

Canadian incorporation; KYC + payout rail selection (owner decisions from repo backlog)

Q2 2027

Commercial launch: paid activation, evaluation enforcement, funded accounts, payouts

2028

Affiliate scale-up; scenario 'Base' trajectory; operational monitoring & transparency dashboards

2029✦

Hybrid live-capital pilot (subject to legal validation); product family expansion

Pre-seed ask: USD 50–100K · Contact: Openfund founding group (details confidential at this stage)
